

# TurboBrowser

www.crispincorp.com

TurboBrowser is a companion application to RapidPlayX. Usually sized narrow and tall, it allows operators to quickly search and find any video clip in their system. Once located, operators can simply drag and drop clips into the playlist for immediate play.

In keeping with Crispin's tradition of providing a scalable system that is non-database dependent for critical on-air operations, TurboBrowser may select media from AssetBase, Crispin's database application, or directly from any video server in the system. The list auto-updates so operator additions and deletions are quickly reflected.

A dual-stage filter allows the clip list to be customized by specifying text at the beginning of, or within the clip ID, title or comment field. This is very useful when multiple groups share a common server and only need to search within a subset of the whole clip inventory. The view is configurable so you see only what you need to see.

## TurboBrowser Key Features

- Quickly locate and add events to the playlist using drag and drop
- Sizeable and configurable companion application to RapidPlayX
- Poll from database or video server for large or small systems
- Search on material ID, title or comment fields
- Works with all broadcast video servers
- Fast and powerful dual-stage filter
- Auto-updates the clip list
