Crispin Core

The evolution of automation starts today

WHAT IS CORE? Crispin's next generation, Core, provides an adaptable approach to fit your ever-changing facility needs. Select options that fit your current need or combine your solution in a hybrid model. Choose what works best for your facility needs and your needs for the future.

CORE HIGHLIGHTS

- Implementation: On-prem, virtualized, cloud or any combination that meets your needs, with the ability to change it tomorrow!
- Disaster recovery: Allows for evacuation of staff while staying operationally familiar to your team.
- Redundancy: Provides a true backup to your system with either an alternate location or web control from anywhere.

ADAPTABLE SOLUTIONS TO FIT YOUR NEEDS

Traditional On-Prem

A proven hardware solution.

OVERVIEW

- Proven hardware solutions.
- Serial and IP third-party interface control.
- Single to multi-channel support.
- Standalone or Hub/Central Operation ready.

Virtualized

Reduce hardware and increase flexibility.

OVERVIEW

- Hyper-convergence solution provides protection for system operations.
- Web-based user interfaces for operational flexibility.
- Service-based VM solution control with front-end web configuration management.

Cloud

Full cloud service.

OVERVIEW

- Adaptable configuration for standard single channel to central/hub operations
- Central ops monitor and control support for:
 - Pop up channel support (cloud).
 - Managed media distribution center – adaptable workflow management. Cloud and direct distribution models.
 - FARlink service provides content moment “anywhere as needed” – Cloud VM data center and on-prem support.
